Project

ViewFinder:

Viewfinder is a social media platform that I created using MERN stack from ground up

Link: https://viewfinder.website/

Functionality:

1. User can Register an account using email
2. User can create, update and delete the user and their posts
3. User can follow other user an get newest post from them
4. User also can add comment and reply to each post
5. user can like or bookmark other user posts

Technology Stack:

1. Mongo,Express,React,Node (MERN)
2. Typescript
3. Tailwindcss
4. Shadcn
5. Tanstack query

Point of Sale Systems

Point of Sale system can be used to update data in myBorgur website .it also handle cart function and data tracking for example how many items sold per day

Link: https://posrestaurant.netlify.app/

Functionality:

1. Add product to cart and calculated the price with tax
2. Update the status of the product based on availability
3. Update the limit or an order, the tax rate, price and number of people per table
4. Show the user how many orders and sales by today ,7days and 30 days and 90 days

Technology Stack:

1. supabase
2. Typescript
3. React
4. Tailwindcss
5. reactHookform
6. Tanstack query

myBorgur

myBorgur project is a food restaurant website that can be dynamically update using the point of sale system. This website is powered by react,supabase and tanstack query

Technology Stack:

1. supabase
2. javascript
3. React
4. Tailwindcss
5. reactHookform
6. Tanstack query
